MAIL DATE

DELIVERY MODE

04/02/2009

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/594,151	Applicant(s) INOUE ET AL.	
	Examiner CHRISS S. YODER III	Art Unit 2622	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 25 September 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-15 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 25 September 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. **Claims 1-15 are rejected under 35 U.S.C. 102(b) as being anticipated by**

Tamai et al. (US Pub. 2002/0154240).

2. In regard to **claim 1**, note Tamai discloses the use of an image correction apparatus comprising a lens distortion calculation unit which acquires information on zoom magnifications contained in data of known images captured at respective different zoom magnifications (paragraphs 077-0110), and calculates lens distortion correction information with respect to each zoom magnification (paragraphs 0100-0110), and a storing unit which stores the lens distortion correction information in association with the zoom magnifications (paragraphs 0077-0110, figures 8-10).

3. In regard to **claim 2**, note Tamai discloses the use of an image correction apparatus comprising a storing unit which contains lens distortion correction information in association with zoom magnifications of a lens (paragraph 0083, and figure 8: memory 17), a selection unit which acquires from data of an input captured image, information on a zoom magnification employed at the time of capturing of the captured image, and selects lens distortion correction information corresponding to the zoom magnification from the storing unit (paragraphs 0083-0086), and a distortion

correction unit which corrects distortion of the captured image ascribable to capturing based on the lens distortion correction information selected (paragraphs 0077-0110, figures 8-10).

4. In regard to **claim 3**, note Tamai discloses that the selection unit selects from the storing unit a plurality of candidate pieces of lens distortion correction information in accordance with the zoom magnification employed at the time of capturing, and correct a row of sample points forming a known shape in the captured image by using each of the plurality of pieces of lens distortion correction information for error pre-evaluation (paragraph 0077), and thereby selects one piece of lens distortion correction information from among the plurality of pieces of lens distortion correction information (paragraphs 0077-0110, figures 8-10).

5. In regard to **claim 4**, note Tamai discloses the use of an image correction apparatus comprising a lens distortion calculation unit which acquires information on zoom magnifications contained in data of known images captured at respective different zoom magnifications (paragraphs 0100-0110), and calculates a lens distortion correction function for mapping points in a lens-distorted image onto points in an image having no lens distortion and a lens distortion function, or an approximate inverse function of the lens distortion correction function, with respect to each lens magnification (paragraphs 0100-0110), and a storing unit which stores the pairs of lens distortion correction functions and lens distortion functions in association with the zoom magnifications (paragraphs 0077-0110, figures 8-10).

6. In regard to **claim 5**, note Tamai discloses the use of an image correction apparatus comprising a storing unit which contains pairs of lens distortion correction functions for mapping points in a lens-distorted image onto points in an image having no lens distortion and lens distortion functions, that are approximate inverse functions of the lens distortion correction functions, in association with respective zoom magnifications of a lens (paragraph 0083, and figure 8: memory 17), a selection unit which acquires from data of an input captured image, information on a zoom magnification employed at the time of capturing of the captured image, and selects from the storing unit the lens distortion function corresponding to the zoom magnification (paragraphs 0083-0086), and a distortion correction unit which corrects distortion of the captured image ascribable to capturing based on the lens distortion function selected (paragraphs 0077-0110, figures 8-10).

7. In regard to **claim 6**, note Tamai discloses the selector unit selects from the memory unit a plurality of candidate lens distortion correction functions in accordance with the zoom magnification employed at the time of capturing, and corrects a sequence of sample points forming a known shape in the captured image by using each of the plurality of lens distortion correction functions for error pre-evaluation (paragraph 0077), and thereby selects one of the plurality of lens distortion functions (paragraphs 0077-0110, figures 8-10).

8. In regard to **claim 7**, note Tamai discloses an image correction apparatus comprising a storing unit which contains lens distortion functions for mapping points in an image having no lens distortion onto points in a lens-distorted image in association

with respective zoom magnifications of a lens (paragraph 0083, and figure 8: memory 17), a selection unit which acquires from data of an input captured image, information on a zoom magnification employed at the time of capturing of the captured image, and selects the lens distortion function corresponding to the zoom magnification from the storing unit (paragraphs 0083-0086), a perspective distortion calculation unit which calculates a perspective distortion function for mapping points in an image having no perspective distortion onto points on a perspective-distorted image, by using an image whose lens distortion is corrected by the lens distortion function selected (paragraph 0077), and a distortion correction unit which corrects distortion of the captured image ascribable to capturing based on the perspective distortion function calculated by the perspective distortion calculation unit (paragraphs 0077-0110, figures 8-10).

9. In regard to **claim 8**, note Tamai discloses the selector unit selects from the memory unit a plurality of candidate lens distortion correction functions in accordance with the zoom magnification employed at the time of capturing (paragraph 0083, and figure 8: memory 17), and corrects a sequence of sample points forming a known shape in the captured image by using each of the plurality of lens distortion correction functions for error pre-evaluation, and thereby selects one of the plurality of lens distortion functions (paragraphs 0077-0110, figures 8-10).

10. In regard to **claim 9**, note Tamai discloses the use of an image correction database creating method comprising acquiring information on zoom magnifications contained in data of known images captured at the respective different zoom magnifications, and calculating a lens distortion correction function for mapping points

Art Unit: 2622

on a lens-distorted image onto points on an image having no lens distortion and a lens distortion function, or an approximate inverse function of the lens distortion correction function, with respect to each lens magnification; and registering the pairs of lens distortion correction functions and lens distortion functions into a database in association with the zoom magnifications (paragraphs 0077-0110, figures 8-10).

11. In regard to **claim 10**, note Tamai discloses an image correction method comprising: consulting a database in which pairs of lens distortion correction functions for mapping points in a lens-distorted image onto points in an image having no lens distortion and lens distortion functions, that are approximate inverse functions of the lens distortion correction functions, are registered in association with respective zoom magnifications of a lens (paragraph 0100-0110), acquiring from data of an input captured image, information on a zoom magnification employed at the time of capturing of the captured image, and selecting the lens distortion function corresponding to the zoom magnification; and correcting distortion of the captured image ascribable to capturing based on the lens distortion function selected (paragraphs 0077-0110, figures 8-10).

12. In regard to **claim 11**, note Tamai discloses that the correcting of the distortion includes mapping a point in a target image having no distortion ascribable to capturing onto a point in a lens-distorted captured image by using the lens distortion function selected which was selected from the image correction database (paragraph 0077), and determining a pixel value at the point in the target image by interpolating pixel values near the mapped point in the captured image (paragraphs 0077-0110, figures 8-10).

13. In regard to **claim 12**, note Tamai discloses that selecting of the lens distortion function includes: selecting a plurality of lens distortion correction functions as candidates in accordance with the zoom magnification employed at the time of capturing (paragraphs 0077) correcting a row of sample points having a known shape in the captured image by each of the plurality of lens distortion correction functions for error pre-evaluation; and selecting one from among the plurality of lens distortion functions (paragraphs 0077-0110, figures 8-10).

14. In regard to **claim 13**, note Tamai discloses the use of an image correction method comprising consulting a database in which lens distortion functions for mapping points in an image having no lens distortion onto points in a lens-distorted image are registered in association with respective zoom magnifications of a lens (paragraph 0077), and acquiring from data of an input captured image, a zoom magnification employed at the time of capturing of the captured image and selecting the lens distortion function corresponding to the zoom magnification (paragraph 0088-0093), calculating a perspective distortion function for mapping points in an image having no perspective distortion onto points in a perspective-distorted image, by using an image whose lens distortion is corrected by the lens distortion function selected; and correcting distortion of the captured image ascribable to capturing based on the perspective distortion function calculated (paragraphs 0077-0110, figures 8-10).

15. In regard to **claim 14**, note Tamai discloses the correcting of the distortion includes mapping a point in a target image having no distortion ascribable to capturing onto a point in a perspective-distorted captured image by using the perspective

distortion function calculated (paragraph 0083-0087), and determining a pixel value at the point in the target image by interpolating pixel values near the mapped point in the captured image (paragraph 0088-0093).

16. In regard to **claim 15**, note Tamai discloses that the selecting of the lens distortion function includes selecting a plurality of lens distortion correction functions as candidates in accordance with the zoom magnification employed at the time of capturing (paragraph 0083-0087), correcting a row of sample points having a known shape in the captured image by each of the plurality of lens distortion correction functions for error pre-evaluation (paragraph 0088-0093), and thereby selecting one from among the plurality of lens distortion functions (paragraphs 0077-0110, figures 8-10).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CHRISS S. YODER III whose telephone number is (571)272-7323. The examiner can normally be reached on M-F: 8 - 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lin Ye can be reached on (571) 272-7372. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
